

Poverty: 2009 and 2010

Issued October 2011

American Community Survey Briefs

ACSBR/10-01

INTRODUCTION

Poverty estimates represent an important indicator of economic well being. This report, using income and household relationship data from the 1-year 2009 and 2010 American Community Surveys (ACS), compares poverty rates for the nation, states, and large metropolitan statistical areas. The report also summarizes the distributions of income-to-poverty ratios for states and the District of Columbia.

HIGHLIGHTS

- Nationally, the poverty rate increased from 14.3 percent in the 2009 ACS to 15.3 percent in the 2010 ACS. The number of people in poverty increased from 42.9 million to 46.2 million during the same time period.
- Thirty-two states experienced an increase in the number and percentage of people in poverty between 2009 and 2010. For 20 states, this was the second consecutive annual increase.¹
- No state had a statistically significant decline in either the number of people in poverty or the poverty rate between 2009 and 2010.
- The percent of people with income below 125 percent of their poverty threshold increased from 18.9 percent in 2009 to 20.1 percent in 2010. During the same time period, the percentage of people with income below 50 percent of

their poverty threshold increased from 6.3 percent to 6.8 percent.

- The poverty rate among large metropolitan areas varies from a low of 8.4 percent to 33.4 percent in the 2010 ACS.

The estimates contained in this report are based on the 2009 and 2010 ACS. The ACS is conducted every month with income data collected for the 12 months preceding the interview. Since the survey is continuous, adjacent ACS years have income reference months in common. Therefore comparing the 2009 ACS with the 2010 ACS is not an exact comparison of the economic conditions in 2009 with those in 2010, and comparisons should be interpreted with care.² For more information on the ACS sample design and other topics visit <www.census.gov/acs/www>.

Poverty

According to 2010 ACS, 46.2 million people or about 15.3 percent of the U.S. population had income below their respective poverty threshold during the year. Compared with the 2009 ACS estimates, the number of people in poverty increased by 3.3 million and the poverty rate increased by 1.0 percentage point.³

² For a discussion of this and related issues see Hogan, Howard, "Measuring Population Change Using the American Community Survey," *Applied Demography in the 21st Century*, eds. Steven H. Murdock and David A. Swanson. Springer Netherlands, 2008.

³ The poverty universe is a subset of the total population covered by the ACS. Specifically, the universe excludes children younger than age 15 who are not related to the householder, people living in institutional group quarters, and those living in college dormitories or military barracks.

* Statistically different from zero at the 90 percent confidence level.

¹Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under age 15 who are not related to the householder, people living in institutional group quarters, and people living in college dormitories or military barracks.

²Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number when added to or subtracted from the estimate forms the 90 percent confidence interval.

Note: Details may not sum to totals because of rounding.

Sources: U.S. Census Bureau, 2009 and 2010 American Community Surveys, 2009 and 2010 Puerto Rico Community Surveys.

Figure 1.
Percentage of People in Poverty in the Past 12 Months by State and Puerto Rico: 2010

Table 1 shows the estimated number and percentage of people in poverty by state in 2009 and 2010. This table also indicates the changes in the number and percentage of people in poverty by taking the difference between the 2009 and 2010 ACS estimates.

Poverty rates for the 50 states and the District of Columbia ranged from a low of 8.3 percent in New Hampshire to a high of 22.4 percent in Mississippi, according to the 2010 ACS. Poverty rates for Alaska (9.9 percent), Maryland (9.9 percent), Connecticut (10.1 percent), and New Jersey (10.3 percent) were among the lowest in the nation (Table 1).⁴ Poverty

⁴ Poverty rates for Alaska, Connecticut, Maryland, and New Jersey were not statistically different from each other.

How Poverty Is Measured

Poverty status is determined by comparing annual income to a set of dollar values called poverty thresholds that vary by family size, number of children, and age of householder. If a family's before tax money income is less than the dollar value of their threshold, then that family and every individual in it are considered to be in poverty. For people not living in families, poverty status is determined by comparing the individual's income to his or her poverty threshold.

The poverty thresholds are updated annually to allow for changes in the cost of living using the Consumer Price Index (CPI-U). They do not vary geographically. The ACS is a continuous survey and people respond throughout the year. Since income is reported for the previous 12 months, the appropriate poverty threshold for each family is determined by multiplying the base-year poverty threshold (1982) by the average of monthly CPI values for the 12 months preceding the survey month.

For more information see "How Poverty Is Calculated in the ACS" at www.census.gov/hhes/www/poverty/methods/definitions.html.

rates for Mississippi (22.4 percent) and New Mexico (20.4 percent) were higher than all other states.⁵

Only New Hampshire had an estimated poverty rate significantly lower than 10 percent in 2010, while five states had single-digit poverty rates in 2009—Alaska, Connecticut, Maryland, New Hampshire, and New Jersey. The number of states with poverty rates above 17 percent increased from 5 in 2009 to 12 states plus the District of Columbia in 2010.⁶

The poverty rate for Puerto Rico in 2010 was 45.0 percent, showing no change from the 2009 rate.

Between 2009 and 2010 ACS, 32 states experienced increases in both the number and percentages of people in poverty. For 20 states, this was the second year in a row with an increase. During the same time period, none of the states had a statistically significant decline in either the number of people in poverty or the poverty rate.

For 14 states and the District of Columbia the changes in the number of people in poverty and the poverty rates were not statistically significant.⁷

⁵ The 2010 ACS poverty rate for New Mexico was not statistically different from the 2010 poverty rate of the District of Columbia.

⁶ The 5 states with poverty rates greater than 17 percent in 2009 were Alabama (17.5 percent), Arkansas (18.8 percent), Kentucky (18.6 percent), Mississippi (21.9 percent), and West Virginia (17.7 percent), and in 2010 there were 12 states—Alabama (19.0 percent), Arkansas (18.8 percent), Georgia (17.9 percent), Kentucky (19.0 percent), Louisiana (18.7 percent), Mississippi (22.4 percent), New Mexico (20.4 percent), North Carolina (17.5 percent), South Carolina (18.2 percent), Tennessee (17.7 percent), Texas (17.9 percent), and West Virginia (18.1 percent), and the District of Columbia (19.2 percent) with poverty rates greater than 17 percent.

⁷ States with no significant change in the number of people in poverty and poverty rate includes Alaska, Arkansas, Colorado, Delaware, District of Columbia, Hawaii, Kansas, Kentucky, Maine, Mississippi, Montana, Nebraska, New Hampshire, South Dakota, and West Virginia.

Figure 1 (map) displays the range of poverty rates across the 50 states, the District of Columbia, and Puerto Rico using the 2010 ACS and Puerto Rico Community Survey. This map shows that poverty rates are higher in the states in the Southern region, while most of the states in the Northeast region had lower poverty rates.

Depth of Poverty

The poverty rate is an estimate of the proportion of people with family or personal income below their poverty threshold. The income-to-poverty ratio gauges how close a family's income is to their poverty threshold, measuring the depth of poverty for those with income below their threshold and the proximity to poverty for those with income above their threshold.

In this report the income-to-poverty ratio is reported as a percentage. To illustrate this concept, an income-to-poverty ratio of 200 percent indicates a family or individual with income equal to twice their poverty threshold, while an income-to-poverty ratio of 50 percent identifies a family or individual with income equal to one-half of their poverty threshold. Families and individuals who are identified as having income below the poverty level have an income-to-poverty ratio of less than 100 percent.

About 20.1 percent of people in the 2010 ACS had an income-to-poverty ratio less than 125 percent, compared with 18.9 percent in the 2009 ACS. Similarly, the percentage of people with an income-to-poverty ratio less than 50 percent increased from 6.3 percent in the 2009 ACS to 6.8 percent in the 2010 ACS.

At the state level, the share of the population with an

income-to-poverty ratio less than 125 percent ranged from a low of 11.2 percent in New Hampshire to a high of 28.9 percent in Mississippi in the 2010 ACS. New Hampshire (11.2 percent), Maryland (12.8 percent), and Connecticut (13.1 percent) had the lowest percentages of people with an income-to-poverty ratio less than 125 percent.⁸ Mississippi (28.9 percent) and New Mexico (26.4 percent) had the largest proportions of people with an income-to-poverty ratio less than 125 percent.

The proportion of people with an income-to-poverty ratio less than 50 percent ranged from a low of 3.8 percent in New Hampshire to a high of 10.7 percent in the District of Columbia.⁹

Poverty in Metropolitan Areas

This brief analyzes poverty rates for large metropolitan areas with populations of 500,000 or more in 2010. More than 80 percent of the U.S. population resides in one of the 366 metropolitan areas and about two-thirds of the total U.S. population lives in the largest areas. Table 2 shows the 10 large metropolitan areas with the lowest poverty rates and the 10 large metropolitan areas with the highest poverty rates.¹⁰

The poverty rates among these metropolitan areas varied widely,

⁸ The proportion of people with an income-to-poverty ratio less than 125 percent for Maryland and Connecticut are not statistically different from each other, while the proportions of people with an income-to-poverty ratio less than 125 percent for Connecticut, New Jersey, Hawaii, and Alaska are not statistically different from each other.

⁹ The proportion of people with an income-to-poverty ratio less than 50 percent for Alaska was not statistically different from New Hampshire, while the proportion of people with an income-to-poverty ratio less than 50 percent for Mississippi was not statistically different from the proportion for the District of Columbia.

¹⁰ In this table, poverty rates for the metropolitan areas may not be statistically different from each other or from areas that are not shown in the table.

according to 2010 ACS. They ranged from 8.4 percent in the Washington-Arlington-Alexandria, DC-VA-MD-WV metro area to 33.4 percent in McAllen-Edinburg-Mission, TX. Honolulu, HI (9.1 percent), Poughkeepsie-Newburgh-Middletown, NY (9.4 percent), and Bridgeport-Stamford-Norwalk, CT (9.4 percent), were among the metropolitan areas with the lowest poverty rates in the nation.¹¹

McAllen-Edinburg-Mission in Texas had the highest poverty rate (33.4 percent) of all large metropolitan areas, followed by Fresno in California with 26.8 percent and El Paso in Texas with 24.3 percent.

SOURCE AND ACCURACY

Data presented in this report are based on people and households

¹¹ Poverty rates for the Washington-Arlington-Alexandria, DC-VA-MD-WV, Honolulu, HI, and Poughkeepsie-Newburgh-Middletown, NY, metro areas were not statistically different from each other. Poverty rates for Honolulu, HI, Poughkeepsie-Newburgh-Middletown, NY, and Bridgeport-Stamford-Norwalk, CT, metro areas were not statistically different from each other.

that responded to the ACS in 2009 and 2010. The resulting estimates are representative of the entire population. All comparisons presented in this report have taken sampling error into account and are significant at the 90 percent confidence level unless otherwise noted. Due to rounding, some details may not sum to totals. For information

on sampling and estimation methods, confidentiality protection, and sampling and nonsampling errors, please see the 2010 ACS Accuracy of the Data document located at <www.census.gov/acs/www/Downloads/data_documentation/Accuracy/ACS_Accuracy_of_Data_2010.pdf>.

WHAT IS THE AMERICAN COMMUNITY SURVEY?

The American Community Survey (ACS) is a nationwide survey designed to provide communities with reliable and timely demographic, social, economic, and housing data for the nation, states, congressional districts, counties, places, and other localities every year. It has an annual sample size of about 3 million addresses across the United States and Puerto Rico and includes both housing units and group quarters (e.g., nursing facilities and prisons). The ACS is conducted in every county throughout the nation, and every municipio in Puerto Rico, where it is called the Puerto Rico Community Survey. Beginning in 2006, ACS data for 2005 were released for geographic areas with populations of 65,000 and greater. For information on the ACS sample design and other topics, visit <www.census.gov/acs/www>.

Notes

The Census Bureau also publishes poverty estimates based on the Current Population Survey's Annual Social and Economic Supplement (CPS ASEC). Following the standard specified by the Office of Management and Budget (OMB) in Statistical Policy Directive 14, data from the CPS ASEC are used to

estimate the official national poverty rate, which can be found in the report *Income, Poverty, and Health Insurance Coverage in the United States: 2010*, available at www.census.gov/prod/2011pubs/p60-239.pdf.

For information on poverty estimates from the ACS and how they differ from those based on the CPS

ASEC, see "Differences Between the Income and Poverty Estimates From the American Community Survey and the Annual Social and Economic Supplement to the Current Population Survey" at www.census.gov/hhes/www/poverty/about/datasources/index.html.
